

Assignment – 8

Q1. Create a JSP page to display "Hello World" on the web page. Also display today's date.

```
<%@ page import="java.util.Date" %>
<html>
<body>
<h1>Hello World</h1>
<p>Today's Date is: <%= new Date() %></p>
</body>
</html>
```

Output:

Hello World

Today's Date is: Thu Apr 09 10:20:32 IST 2026

Q2. Design an employee details page with fields like—employeeid, name, mobile, email, gender, date of birth, address, country, and languages known. The country must be a drop-down menu. With two options: India and other. Language known should be a check box with 3 to 4 options to select. Design a JSP page to get all the details from the form and display it.

form.jsp

```
<html>
<head>
  <title>Employee Form</title>
</head>
<body>
<h2>Employee Details Form</h2>
<form action="display.jsp" method="post">
  Employee ID: <input type="text" name="id"><br><br>
  Name: <input type="text" name="name"><br><br>
  Mobile: <input type="text" name="mobile"><br><br>
  Email: <input type="email" name="email"><br><br>

  Gender:
  <input type="radio" name="gender" value="Male"> Male
  <input type="radio" name="gender" value="Female"> Female <br><br>

  DOB: <input type="date" name="dob"><br><br>

  Address:<br>
  <textarea name="address"></textarea><br><br>

  Country:
  <select name="country">
```

```

        <option value="India">India</option>
        <option value="Other">Other</option>
    </select><br><br>

```

Languages Known:

```

<input type="checkbox" name="lang" value="English"> English
<input type="checkbox" name="lang" value="Hindi"> Hindi
<input type="checkbox" name="lang" value="Odia"> Odia
<input type="checkbox" name="lang" value="Spanish"> Spanish
<br><br>
<input type="submit" value="Submit">
</form>
</body>
</html>

```

display.jsp

```

<%@ page import="java.util.*" %>
<html>
<body>
<h2>Employee Details</h2>
ID: <%= request.getParameter("id") %><br>
Name: <%= request.getParameter("name") %><br>
Mobile: <%= request.getParameter("mobile") %><br>
Email: <%= request.getParameter("email") %><br>
Gender: <%= request.getParameter("gender") %><br>
DOB: <%= request.getParameter("dob") %><br>
Address: <%= request.getParameter("address") %><br>
Country: <%= request.getParameter("country") %><br>
Languages Known:
<%
String langs[] = request.getParameterValues("lang");

if (langs != null) {
    for(String lang : langs){
        out.println(lang + " ");
    }
}
%>
</body>
</html>

```

Output:

Name: ABINASH SAHOO
 SIC No: 24BCSH57
 Lab Roll No: 32
 Date of Experiment: 6th April 2026

Q3. Create a JSP page to take a number as input from the user and determine if the number is a prime number or not.

form.jsp

```
<html>
<body>
<h2>Prime Number Check</h2>
<form action="result.jsp">
Enter Number: <input type="text" name="num">
<input type="submit" value="Check">
</form>
</body>
</html>
```

display.jsp

```
<html>
<body>
<%
int n = Integer.parseInt(request.getParameter("num"));
boolean isPrime = true;

if (n <= 1) {
    isPrime = false;
} else {
    for (int i = 2; i <= n / 2; i++) {
        if (n % i == 0) {
            isPrime = false;
            break;
        }
    }
}
%>
<h2>
<%= n %> is
<%= (isPrime ? "Prime" : "Not Prime") %>
</h2>
</body>
</html>
```

Output:

Prime Number Check

Enter Number:

19 is Prime

Q4. Design a BMR calculator with the fields Age, Gender, Height (CM), and Weight (KG). Use the following formula to calculate and display the BMR (Calories/day).

- o For men: $BMR = (10 \times \text{Weight}) + (6.25 \times \text{Height}) - (5 \times \text{Age}) + 5$
- o For women: $BMR = (10 \times \text{Weight}) + (6.25 \times \text{Height}) - (5 \times \text{Age}) - 161$

form.jsp

Name: ABINASH SAHOO
SIC No: 24BCSH57
Lab Roll No: 32
Date of Experiment: 6th April 2026

```

<html>
<body>
<h2>BMR Calculator</h2>
<form action="result.jsp">
    Age: <input type="text" name="age"><br><br>

    Gender:
    <input type="radio" name="gender" value="male"> Male
    <input type="radio" name="gender" value="female"> Female <br><br>

    Height (cm): <input type="text" name="height"><br><br>
    Weight (kg): <input type="text" name="weight"><br><br>
    <input type="submit" value="Calculate">
</form>
</body>
</html>

```

display.jsp

```

<html>
<body>
<%
int age = Integer.parseInt(request.getParameter("age"));
double height = Double.parseDouble(request.getParameter("height"));
double weight = Double.parseDouble(request.getParameter("weight"));
String gender = request.getParameter("gender");
double bmr;

if (gender.equals("male")) {
    bmr = (10 * weight) + (6.25 * height) - (5 * age) + 5;
} else {
    bmr = (10 * weight) + (6.25 * height) - (5 * age) - 161;
}
%>
<h2>Your BMR is: <%= bmr %> Calories/day</h2>
</body>
</html>

```

Output:

BMR Calculator

Age:

Gender: ☒ Male ☐ Female

Height (cm):

Weight (kg):

Your BMR is: 1525.0 Calories/day

Q5. Write JSP code to do the following:

- o Create header.jsp and footer.jsp files.
- o header.jsp should contain as it etitle and navigation links.
- o footer.jsp should contain footer content (e.g., Year, Contact info).
- o Create three JSP pages: home.jsp, about.jsp, and contact.jsp.
- o Homepage: must include a heading, a short paragraph, and an image with a

caption.

- o About page: must include atleast two paragraphs describing the site/ organization.

- o Contact page: must contain a contact form with fields (Name, Email, Phone, Subject,

Message). Submitted data should be displayed on a JSP page.

Use the include directive to add the same header and footer to all three pages, and apply

an external CSS file to style them.

header.jsp

```
<html>
<head>
  <style>
    body {
      font-family: Arial;
      margin: 20px;
    }
    h1 {
      color: blue;
    }
    a {
      margin-right: 10px;
      text-decoration: none;
      color: black;
    }

    a:hover {
      color: red;
    }
  </style>
</head>
<body>
<h1>My Website</h1>
<a href="home.jsp">Home</a> |
<a href="about.jsp">About</a> |
<a href="contact.jsp">Contact</a>
<hr>
```

home.jsp

```
<%@ include file="header.jsp" %>
<h2>Contact Form</h2>
<form action="contact.jsp">
  Name: <input type="text" name="name"><br><br>
  Email: <input type="email" name="email"><br><br>
  Phone: <input type="text" name="phone"><br><br>
  Subject: <input type="text" name="subject"><br><br>
  Message:<br>
  <textarea name="message"></textarea><br><br>
  <input type="submit" value="Submit">
</form>
<%@ include file="footer.jsp" %>
```

Name: ABINASH SAHOO

Q6. Design a login form with an email and password field. If the email id is given by the user

as admin@gmail.com and the password as admin, forward the request to welcome.jsp else display “Invalid Credentials” message.

login.jsp

```
<html>
<body>
<h2>Login</h2>
<form action="check.jsp">
    Email: <input type="text" name="email"><br><br>
    Password: <input type="password" name="password"><br><br>
    <input type="submit" value="Login">
</form>
</body>
</html>
```

check.jsp

```
<%
String email = request.getParameter("email");
String password = request.getParameter("password");

if (email.equals("admin@gmail.com") && password.equals("admin")) {
    request.getRequestDispatcher("welcome.jsp").forward(request, response);
} else {
    out.println("<h3>Invalid Credentials</h3>");
}
%>
```

welcome.jsp

```
<html>
<body>
<h2>Welcome Admin!</h2>
</body>
</html>
```

Output:

Login

Email:

Password:

Welcome Admin!
